

Marketing Module Research Review

1 Gaps — Missing Features or Considerations

- **No email marketing / drip campaigns** This is a glaring omission. Email nurturing is the highest-ROI channel in real estate (open house follow-ups, price drop alerts, new listing notifications to buyer lists). Must be included.
- **No WhatsApp / SMS marketing**: In MENA and French-speaking African markets (the AR + FR locales suggest this is the target), WhatsApp is the primary communication channel. WhatsApp Business API integration for broadcast lists and automated responses is table stakes.
- **No referral / word-of-mouth system**: Real estate runs on referrals. A simple referral tracking program (past clients referring new ones, with incentives) is missing.
- **No listing syndication**: Pushing listings to external portals (Idealista, SeLogger, Bayut, etc.) is often bundled under marketing. If Biens Management doesn't own this, Marketing should.
- **No QR code generation**: For yard signs, flyers, business cards — linking physical marketing to digital tracking. Trivial to build, high perceived value.
- **No print material generation**: Brochures, property flyers, window display cards. Agencies still use physical marketing heavily. The Design sub-module should cover this.
- **No review / reputation management**: Google Reviews are a top local SEO signal. Automated review request emails/SMS after transactions close would tie into both SEO and brand trust.
- **No A/B testing framework mentioned**: For ads, landing pages, and email subject lines. Without this, the "optimization" promise in Strategy & Planning is hollow.
- **No lead attribution model**: "Source tracking" is mentioned but not fleshed out. Multi-touch attribution is needed (a lead saw a Google Ad, then visited via SEO, then converted on a landing page — who gets credit?). This is what justifies marketing spend.
- **Budget allocation "plan" is vague**: Is this AI-recommended? Manual? Template-based? This needs to be concrete — ideally AI-suggested based on agency size, location, and listing volume.

2 Overlaps — Feature Ownership Boundaries

Feature	Currently In	Should Belong To	Rationale
<u>Website builder</u>	Marketing 	<u>"Your Site Developer"</u>	→ Full websites are a <u>service offering</u> , not a <u>self-serve marketing tool</u> . Marketing should only own landing pages (single-purpose, campaign-tied).
<u>Logo generator</u>	Marketing (Design)	Resmo Design	Logo/brand identity is a one-time setup activity, not a recurring marketing task. Design module should own all brand assets.
<u>Brand kit builder</u>	Marketing (Design)	Resmo Design	Brand guidelines are foundational, not campaign-specific.
<u>Social templates</u>	Marketing (Design)	<u>Marketing (correct)</u>	Campaign assets, iterated frequently. Marketing owns them but should pull brand kit from Design.
<u>Ad creative generator</u>	Marketing (Design)	<u>Marketing (correct)</u>	Directly tied to ad campaigns.
<u>Community inbox</u> 	Marketing (Social)	<u>Resmo CRM</u> 	Responding to DMs/comments is lead management, not marketing automation. CRM should own all conversations.
 Campaign calendar 	Marketing (Strategy)	<u>Productivity</u> or <u>Marketing</u>	If marketing-only, keep it. If it syncs with team tasks/assignments, Productivity should provide the calendar engine and Marketing overlays campaign data.
 Leads generated / conversion tracking	Marketing (Analytics) 	Shared: Marketing + CRM	Marketing tracks lead <i>acquisition</i> . CRM tracks lead <i>conversion</i> . Handoff: once a lead enters the pipeline, CRM owns it.
 Target persona builder	Marketing (Strategy)	<u>Marketing (correct)</u>	But should feed into CRM segmentation — build once, use everywhere.

Feature	Currently In	Should Belong To	Rationale
Property views analytics	Marketing (Analytics)	Resmo Biens Management	Property-level analytics (views, saves, inquiries) belong with the listing. Marketing gets aggregate/campaign-level metrics.
